This data file was prepared for the Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services (HHS), by Synectics for Management Decisions, Inc. (Synectics), Arlington, Virginia. Data collection was performed by Mathematica Policy Research (Mathematica), Princeton, New Jersey.

Terms of Use

These data are distributed under the following terms of use. By continuing past this page, you signify your agreement to comply with the requirements as stated below:

Privacy of Study Respondents

Unauthorized disclosure of identifiable information violates the pledge given to the providers of the information. Disclosure of identifiable information may also be punishable under federal law. Therefore, users of data agree:

To use these datasets solely for research or statistical purposes and not for reidentification of specific study respondents.

To make no use of the identity of any study respondents discovered inadvertently and to report any such discovery to SAMHSA (SAMHSA_support@smdi.com).

Public Domain Notice

All material appearing in this report is in the public domain and may be reproduced or copied without permission from SAMHSA. Citation of the source is appreciated. However, this publication may not be reproduced or distributed for a fee without the specific, written authorization of the Office of Communications, SAMHSA, U.S. Department of Health and Human Services.

Data Citation

Data users agree to reference the following citation in any of the publications that use these public use data.

Substance Abuse and Mental Health Services Administration, *National Mental Health Services Survey (N-MHSS): 2012. Data on Mental Health Treatment Facilities*. BHSIS Series S-69, HHS Publication No. (SMA) 16-4949. Rockville, MD: Substance Abuse and Mental Health Services Administration, 2015.

Authors of publications that use these data are required to send citations of their published works to SAMHSA for inclusion in a database of related publications (SAMHSA_support@smdi.com).

Disclaimer

Data users acknowledge that SAMHSA and SMDI (Synectics) will bear no responsibility for use of the data or for interpretations or inferences based upon such uses.

Violations

If SAMHSA or SMDI determines that this “Terms of Use” agreement has been violated, then possible sanctions could include:

- Report of the violation to the Research Integrity Officer, Institutional Review Board, or Human Subjects Review Committee of the user's institution.
- If the confidentiality of human subjects has been violated, then report of the violation may be made to the Federal Office for Human Research Protections.
- Report of the violation of federal law to the United States Attorney General for possible prosecution.
- Court awarded payments of damages to any individual(s)/organization(s) harmed by the breach of confidential data.

Description of the National Mental Health Services Survey (N-MHSS)

The 2012 National Mental Health Services Survey (N MHSS) was conducted from September 2012 through February 2013. The N-MHSS collects information from all known facilities¹ in the United States, both public and private, that provide mental health treatment services to people with mental illness. The Center for Behavioral Health Statistics and Quality (CBHSQ) of the Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services, plans and directs the N-MHSS.

The N-MHSS provides the mechanism for quantifying the dynamic character and composition of the U.S. mental health treatment delivery system. It is the only source of national and state-level data on the mental health services delivery system reported by both publicly-operated and privately-operated specialty mental health care facilities. The N-MHSS is designed to collect data on the location, characteristics, and utilization of organized mental health treatment service providers throughout the 50 states, the District of Columbia, and the U.S. territories.² The 2012 survey obtained basic data on the number and characteristics of these specialty mental health treatment service providers. To reduce reporting burden, no data were collected on the number and characteristics of clients served (client counts) in these treatment facilities as they were in the 2010 N-MHSS.

The objective of the N-MHSS is to collect data that can be used for multiple purposes:

- To assist SAMHSA and state and local governments in assessing the nature and extent of services provided in state-funded, state-operated, and private non-profit and for-profit mental health treatment facilities, and in forecasting mental health treatment resource requirements;
- To update SAMHSA's Inventory of Behavioral Health Services (I-BHS), an inventory of all known mental health and substance abuse treatment facilities in the United States, which can be used as a frame for future surveys of these facilities;
- To describe the nature and scope of mental health treatment services and conduct comparative analyses for the nation and states; and
- To update the information in the mental health component of SAMHSA's online Behavioral Health Treatment Services Locator, which includes a searchable database of licensed and accredited public and private facilities for the provision of mental health treatment. The Locator is available at <https://findtreatment.samhsa.gov>.

¹ Entities responding to the N-MHSS are referred to as "facilities." *Survey coverage* provides definitions of the types of mental health treatment facilities included in the N-MHSS.

² In the 2012 N-MHSS, the territories included American Samoa, Guam, Puerto Rico, and the U.S. Virgin Islands.

Data Collection Procedures for the 2012 N-MHSS

Field period

The field period for the 2012 N-MHSS, which included mailout and data collection operations, ran from September 19, 2012, through February 28, 2013.

Survey universe

The 2012 N-MHSS survey universe included 22,457 facilities across the United States and its jurisdictions. Most facilities in the 2012 N-MHSS frame were identified from the updated database produced after fielding the 2010 N-MHSS, supplemented by the 2011 mental health augmentation and new facilities that states requested be added to the I-BHS.

Survey coverage

The following types of mental health facilities were included in the 2012 N-MHSS:

- *Psychiatric hospitals*—Facilities licensed and operated as state/public psychiatric hospitals or as state-licensed private psychiatric hospitals that primarily provide 24-hour inpatient care to persons with mental illness. They may also provide 24-hour residential care and/or less than 24-hour care (i.e., outpatient, partial hospitalization), but these additional service settings are not requirements.
- *General hospitals with a separate inpatient psychiatric unit*—Licensed general hospitals (public or private) that provide inpatient mental health services in separate psychiatric units. These units must have specifically allocated staff and space for the treatment of persons with mental illness. The units may be located in the hospital itself or in a separate building that is owned by the hospital. Throughout this report (text, figures, and tables), these facilities will be referred to as **general hospitals**.
- *Veterans Affairs medical centers*—Facilities operated by the U.S. Department of Veterans Affairs, including general hospitals with separate psychiatric inpatient units, residential treatment programs, and/or psychiatric outpatient clinics.
- *Outpatient or day treatment or partial hospitalization mental health facilities*—Facilities that (1) provide only outpatient mental health services to ambulatory clients, typically for less than three hours at a single visit or (2) provide only partial day mental health services to ambulatory clients, typically in sessions of three or more hours on a regular schedule. A psychiatrist generally assumes the medical responsibility for all clients and/or for the direction of their mental health treatment. Throughout this report (text, figures, and tables), these facilities will be referred to as **outpatient clinics**.
- *Residential treatment centers (RTCs) for children*—Facilities not licensed as psychiatric hospitals that primarily provide individually-planned programs of mental health treatment in a residential care setting for children under age 18. (Some RTCs for children may also treat young adults.) RTCs for children must have a clinical program that is directed by a psychiatrist, psychologist, social worker, or psychiatric nurse who has a master's or doctoral degree. To qualify as an RTC, the primary reason for admission of more than half of the clients must be mental illness or emotional disturbance that can be classified by

DSM-III/DSM-III-R, DSM-IV/DSM-IV-TR, or ICD-9-CM/ICD-10-CM codes, other than codes for intellectual disability, developmental disorders, and substance use disorders.

- *Residential treatment centers (RTCs) for adults*—Facilities not licensed as psychiatric hospitals that primarily provide individually-planned programs of mental health treatment in a residential care setting for adults.
- *Multi-setting mental health facilities (non-hospital residential plus outpatient and/or day treatment/partial hospitalization)*—Facilities that provides mental health services in two or more service settings (residential and outpatient and/or day treatment/partial hospitalization) and is not classified as a psychiatric hospital, general hospital, medical center, or residential treatment center. (The classification of psychiatric hospital, general hospital, medical center, or residential treatment center—any of which can offer mental health services in two or more service settings—takes precedence over a multi-setting classification.)
- *Other*—Facilities that provide mental health services, but cannot be classified as one of the specialty mental health treatment facilities as defined above.

Exclusions

The 2012 N-MHSS survey universe excluded (1) Department of Defense (DoD) military treatment facilities, (2) individual private practitioners or small group practices not licensed as a mental health clinic or center, and (3) jails or prisons.

Content

The 2012 N-MHSS survey instrument was a 6-page document with 20 numbered questions.

Topics included:

Facility type and operation

- Facility treatment characteristics (e.g., service settings offered, specific services offered, and special programs/groups offered)
- Facility operating characteristics (e.g., age groups accepted and services provided in non-English languages)
- Facility management characteristics (e.g., availability of a sliding fee scale, and type of payment or insurance accepted for mental health treatment services)
- Changes were made between the 2010 and 2012 questionnaires, primarily to reduce reporting burden, while maintaining the ability to update basic facility characteristics and contact information needed for the online Behavioral Health Treatment Services Locator. These changes included:
- Removal of questions related to a facility's: primary treatment focus; affiliation with a religious organization; computerized functions; quality assurance practices; single payment source accounting for more than half of facility's total funding; smoking policy; use of seclusion and restraint practices; and licensing, certification, or accreditation agency/organization.

- Removal of the following questions related to clients served (as of a specified survey reference date): number of clients (client counts) who received services/were enrolled in treatment; number of clients by selected demographic characteristics and by type of service setting; number of specifically-designated mental health beds; percentage of co-occurring mental and substance use disorder clients enrolled; number of mental health treatment admissions (in the past 12-month period); and the percentage of these admissions who were military veterans.
- Reduction in the following survey question's categories: treatment approaches offered by facility; supportive services/practices offered by facility; and client payments/insurance accepted by facility.
- Other changes: in question A3, separation of the single service category "outpatient, day treatment or partial hospitalization services" into two separate categories ("less than 24-hour day treatment or partial hospitalization services" and "less than 24-hour outpatient mental health services"); a change in the wording of question A3 to stress "services are offered at facility" rather than "setting where services are offered at facility"; a change in the age groups accepted for treatment; an addition of a question (A8) in which facilities specify the mental disorder(s)/ condition(s) the facility provides treatment services for; addition of the types of clients treated to question about specially-designed programs/groups offered at facility; and expansion of the questions related to languages spoken by staff.

Data collection

Three data collection modes were employed: a secure web-based questionnaire, a computer-assisted telephone interview (CATI), and a paper questionnaire sent by mail on request. In 2012, survey procedures were designed to encourage web-based response; only facilities that requested to complete the survey on paper were mailed or faxed a copy of the questionnaire.

Advance letters from SAMHSA were sent to all facilities to announce the survey and request facility participation. An initial survey packet was mailed to facilities on September 19, 2012. This packet, which was intended to encourage completion of the survey on the web, included the SAMHSA cover letter and a web flyer. The letter provided the toll-free helpline number for respondents to call if they had additional questions about the survey. The web flyer was personalized for each facility with a unique user ID and password and included the web address for access to the questionnaire, and the telephone and email address to reach the survey helpline staff.

The web questionnaire was available to all facilities during the entire data collection period of September 19, 2012, to February 28, 2013. Telephone data collection began on October 25, 2012, and ended on February 28, 2013. The interviewers contacted facility directors or a contact person designated by the director. They described the study and read questions as they were worded in the CATI script.

To increase the survey response rate, reminder letters, telephone calls, faxes, and emails were scheduled and used throughout the data collection period to contact all facilities that had not yet responded to the survey. A special "storm letter" was sent to nonrespondents nationwide in November because of system downtime due to Hurricane Sandy.

Eligibility and survey response rate

Table 1.1 presents a summary of eligibility and response rate information. Of the 22,457 mental health facilities in the survey universe, 5,675 facilities (25.3 percent) were found to be closed or ineligible for the survey because they did not provide mental health treatment services; provided treatment for incarcerated persons only (i.e., in jails or prisons); were a facility operated by the DoD; or were an individual or small group mental health practice not licensed or certified as a mental health center or clinic.

Table 1.1. N-MHSS facilities, by status and mode of response: 2012

	Number	Percent
Total facilities in survey	22,457	100.0
Closed/ineligible	5,675	25.3
Eligible	16,782	74.7
Total eligible	16,782	100.0
Non-respondents	1,599	9.5
Respondents	15,183	90.5
Excluded from report	1,551	10.2
Administrative only	1,208	8.0
Out-of-scope facilities	343	2.3
Eligible for report	13,632	89.8
Mode of response	13,632	100.0
Internet ¹	7,833	57.5
Telephone	5,799	42.5

¹ Includes one paper questionnaire that was entered into the web instrument.

Facility Reporting and Selection for the 2012 N-MHSS Report

Of the 16,782 eligible facilities in the survey, 15,183 (90.5 percent) completed the survey. The facility respondents included 1,208 facilities that provided administrative services only and an additional

343 facilities that were later identified as being out-of-scope; these two groups of facilities are excluded from this report. The excluded facilities and reasons for exclusion fell into two categories:

- (1) A total of 1,208 administrative-only facilities were excluded. These facilities are included in SAMHSA's online Behavioral Health Treatment Services Locator; however, given that these facilities did not provide direct mental health treatment services, they were considered out-of-scope for this report.
- (2) A review of the facilities that reported their facility type and operation as "Other" found 343 to be out-of-scope, so they were excluded from the analysis in this report.

After the exclusion of the 1,551 out-of-scope facilities, data from 13,632 eligible respondent

facilities were included in this 2012 N-MHSS report. Of the 13,632 eligible survey respondent facilities included in this report, 57.5 percent completed the survey on the web, and 42.5 percent on the telephone.

Quality Assurance

The web and CATI questionnaires were based on the paper questionnaire and employed similar skip logic. Both the web and CATI instruments were programmed to be self-editing; that is, respondents were prompted to complete missing responses and to confirm or correct inconsistent responses on critical items. Both programs were tested for accurate text and skip patterns, verifications, and valid values, as well as for consistency with the paper questionnaire. The process for handling completed mail questionnaires was to edit the questionnaire booklet in accordance with the editing specifications developed and approved by SAMHSA, call the respondent if there were any questions, and enter the responses into the web instrument. Note that for the 2012 N-MHSS, only five respondents requested a paper questionnaire. All returned the questionnaires, but four of the five also called and completed the questionnaire via telephone before their paper versions were received, so only one paper copy was edited and entered into the web instrument.

Response Rates

The final unit response rate for eligible facilities was 90.5 percent. Extensive follow-up during data collection and careful editing maximized item response; the item response rates averaged approximately 98.6 percent across all 96 separate items.

Data Considerations and Limitations

As with any data collection effort, certain procedural considerations and data limitations must be taken into account when interpreting data from the 2012 N-MHSS. Some general issues are listed below. Considerations and limitations of specific data items are discussed where the data are presented.

- The N-MHSS is a voluntary survey and while every effort is made to obtain responses from all known mental health treatment facilities, some facilities did not respond. There was no adjustment for the 9.5 percent facility non-response.
- Multiple responses were allowed for certain questionnaire items (e.g., services provided in non-English languages and type of payment or insurance accepted for mental health treatment services). Tabulations of data for these items include the total number of facilities reporting each response category.
